Introduction	Results			Results Continued		
◆ Increasing use of electronic health records (EHRs) over the past two decades has enabled large-scale health data research		BENEFITS	LIMITATIONS		BENEFITS	LIMITATIONS
<ul> <li>Since EHRs are used in daily clinical practice, data are often extracted and stored in electronic data warehouses (EDWs) to enable research and quality improvement initiatives</li> <li>The Cerner Health Facts EDW contains over 63 million unique patients from 863 participating health facilities</li> <li>The Cerner i2b2 EDW at University of Missouri-Kansas City (UMKC) and Truman Medical Center (TMC) contains over 700,000 unique patients from the three TMC facilities</li> <li>The Health Facts and i2b2 EDWs are used for</li> </ul>	Shared Between Health Facts & i2b2	trained physicians, researchers, and students  De-identification allows "Non-Human Subjects Research" designation for easier data access; Cerner has established HIPAA-compliant operating policies to establish	<ul> <li>Incorrect EHR data propagate through to EDWs</li> <li>Limited to participating Cerner facilities (i.e. no EPIC sites)</li> <li>Significant financial barriers for personnel and hardware to stand up and maintain databases</li> </ul>	Unique to i2b2	<ul> <li>User-friendly, dragand-drop query building</li> <li>Data curated by Cerner professionals</li> <li>Data are current; new data loading every other week</li> <li>Available anywhere via web browser</li> </ul>	<ul> <li>Data limited to available, mapped concepts</li> <li>Data views and analysis limited to the i2b2 program plug-ins</li> <li>Constrained longitudinal analysis due to limited views</li> <li>No back-end database access</li> </ul>
research and quality improvement projects by physicians, researchers, and students at UMKC and TMC in Kansas City, Missouri		<ul><li>Large patient volumes (over 63 million)</li></ul>	<ul> <li>Requires expert database analyst to manage</li> </ul>	<ul> <li>Conclusions</li> <li>◆ As more research centers around EDW health data analysis, it will be crucial to understand how each EDW is optimized for specific analysis.</li> <li>◆ There are trade-offs that must be considered with EDW data access and end-user ease-of-use. EDW users and administrators must be in conversation with EDW managers and creators to create warehouses that are optimal for analysis.</li> </ul>		
Objective		<ul> <li>Access to all data tables through</li> </ul>	◆ SAS user interface with proc SQL data			
◆ We compared characteristics of Health Facts and i2b2 for use with quality improvement projects providing shared and unique benefits and limitations each presents	Unique to Health Facts	<ul> <li>relational database</li> <li>Uniquely positioned for longitudinal analysis (2000-2016)</li> <li>Access multi-node</li> </ul>	<ul> <li>with proc SQL data access queries</li> <li>Missing and null values are prevalent</li> <li>Data are updated and refreshed</li> </ul>			
Health Facts Benefits & Shared i2b2 Benefits		computer through remote desktop	annually	Disclosures
